### C4U- Recessed Task Light

Touch Dimmer  
Sensor

## Recessed Task Lighting

- The LED Task Light option comes fully installed in your chosen Slate Private Office model. The following steps will show how to properly power and use the lighting system.
- Locate a 120V power source for the DC Power Supply, then chose a concealed area to store the DC Power Supply and Mounting Block.
- NOTE: The DC Power Supply can power up to 13' of lighting and accept multiple Starter Cords. Insert the applicable electrical connectors from the Starter Cords into the Mounting Block. The Power Cord can now be plugged in to the 120V power source.
- The Touch Dimmer Sensor will light up once power is received to it. The sensor can be tapped to turn on, dim, and turn off the lighting system.
